Antofagasta and Its New Transcontinental Route Across South America

kind, and out of it come vast quantities of copper and tin.

Within a few miles of Antofagasta is Chuquicamata, where the Guggenhelm syndicate has some of the largest deposits of low-grade copper on earth. They can be worked at a profit and will soon be supplying the greater part of the copper from the South American continent. Further north, at Uyani, are tin feeds thousands of sheep, alpacas and mines, and down the same road comes the tin of Potosi and Oruro. Indeed, a almost all of the way down to Oruro. river of minerals is already flowing through the port and the outlook is that the stream will increase with the development of the enormous deposits of the interior. Antofagasta is also the beginning of the new Transandine road that is to cross the continent by way of Uyuni, Tupiza and the Argentine system. Only about a hundred miles of this railroad remains to be built, and when it is completed travelers can go forth from here to Buenos Ayres in three or four

Hope of the Future.

The Antofagasta of the present shows the hope of the future. It grows like the thistles on the mountain farms of Virginia, and today looks more like an American town of our arid southwest than anything I have yet seen in South America. The houses are mostly of wood, roofed with galvanized iron. The streets are wide and many of them un-The population reminds one of our frontier. The characteristic sights of the Andes have disappeared. There are no blanketed Indians and no liamas. Wagons, carts and cabs have taken their places. The town is cosmopolitan. hear every language spoken as you move through the streets, and are jostled by British and Germans, Austrians and There is also a large proportion of Chileans. The people are whites, and the red and mixed races seem to be confined to the Ander.

The harbor of Antofagasta is poor, but it is filled with shipping and the wharves are piled high with goods. There are stacks of Oregon pine, piles of bags of American flour and cords of steel rails was to prevent the Indians from stealing houses and some very respectable stores. and structural steel brought in by our steel trust. The place is the busiest of all the ports between Valparaiso and Panama, and now that the canal is completed it will send north the nitrate, through a country as smooth as a floor. public buildings face, but altogether it is borax, copper, tin and other minerals The Plateau is covered with stones. It is exceedingly dreary. now pouring into it from the regions be-

A Semi-Desert Country.

The first part of this trip was over the high plateau of Bolivia. This is a semidesert country about 600 miles long and of varying width. Its only vegetation is half-starved grass and dry bushes, but it llamas, and we had animal life in sight Now and then we passed a village of Indiana and always there were the scattered huts of the Aymaras spotting the plain. The latter were round in shape and many of them had roofs made of mud bricks, symmetrically joined. A single family often had several of these round huts and in addition corrals for

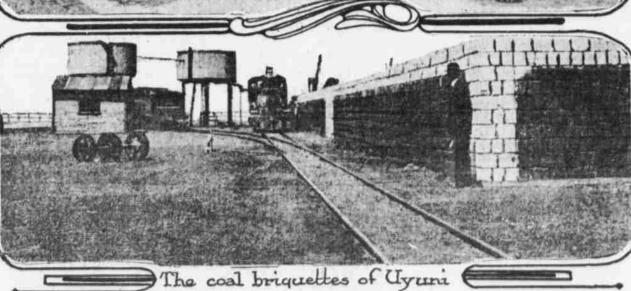

At one of the stations where we stopped to get our dining car we saw a great drove of liamas. They had brought fuel to the railway for shipment to La Paz and were about to start back with merchandise for their return trip to a town in the hills. The fuel was what I might call Bolivian cord wood. It consisted of the limbs of stunted evergreens, each as big around as your finger. They had been grubbed from the mountains and packed up in bundles about three feet square and two feet in thickness.

Further down the road we saw great piles of peat-moss, another fuel that grows in the Andes. The moss is of a woody resinous nature, and when lighted gives out a great heat. It grows on the that of a tube.

All along the railroad we could see the surplus away. the Argentine is to join the La Pazbricks. They were corded up, as it were, population rises and falls as tin goes up the coal. Such fuel in the high Andes is The streets are paved with cobbles, and worth \$50 a ton.
